CONTROLLED HYPERTHERMIC THERAPY SYSTEM

TECNICA: ERMOTERAPIA

Il calore nei tessuti a microonde per somministrazione controllata, sistema per l'ipertermia

Il sistema su complessi meccanismi con i tessuti biologici, in pratica si induce un riscaldamento simultaneo del processo

Il principio dell'ipertermia e utilizzato nel trattamento consente un controllo nel campo delle patologie

La tecnica di somministrazione tramite un particolare applicatore completo di bolus in cui circola acqua distillata che consente un perfetto adattamento elettromagnetico e meccanico a qualunque parte del corpo. L'efficace accoppiamento elettromagnetico, l'omogeneità del campo e il controllo della temperatura dell'acqua del bolus dell'applicatore garantiscono una efficace trasmissione dell'energia emessa e un corretto e mirato riscaldamento dei tessuti in profondità.

Durante il trattamento la temperatura viene continuamente rilevata e mantenuta ai valori prescritti tramite il controllo della potenza emessa.

La frequenza di emissione è in grado di assicurare la penetrazione nei tessuti profondi mentre l'acqua termostata del bolus garantisce il mantenimento ai valori fisiologici della temperatura cutanea.

La potenza contenuta e focalizzata permette di operare in condizioni di massima sicurezza per il paziente, per l'operatore e per il personale professionalmente esposto.

- Localizzazione e profondità del trattamento
- Controllo della temperatura cutanea
- Controllo dell'energia emessa e della sua distribuzione
- Massima sicurezza per il paziente e l'operatore

THE IN

The increase
the improvement
HYPER

Clinical applications of the microwave energy, used for human rehabilitation are based on complex biological mechanisms. In particular the induced heating accelerates the inflammatory process healing.

HYPERTHERM PT100 based on hyperthermic therapy and innovative technologies for controlled treatment, permits to obtain excellent clinical results in the inflammatory and traumatic pathologies.

Microwave power (434 MHz frequency) is emitted by a special contact applicator with water filled bolus which allows a perfect electro-magnetic and mechanical adaptation to any part of the human body. The effective electro-magnetic coupling, the homogeneity of the field and the water temperature control guarantee an effective transmission of the R.F. power and a correct localized heating of deep tissues.

The skin temperature is constantly tested during the treatment and kept at the present value through the control of the power.

The frequency value assures the penetration into deep the bolus water control temperature guarantees the maintenance of the skin temperature in the physiological range.

The low level and the focalization of the emitted power operate according to safety criteria for the patient, the operator and other professional staff members.

- Treatment localization and depth
- Continuous control of skin temperature
- Control of the power value and its distribution
- Maximum safety for the patient and for the operator

LABTHERMICS TECHNOLOGIES

INTERTHERM™ 100

- Adds RF interstitial therapy capabilities to the SCOTHERM™ 100
- Provides hyperthermia delivery to locations difficult or impossible to treat with external ultrasound or microwave applications
- Designed for use with standard brachytherapy templates and needle implant techniques
- Up to 32 channels can be configured to treat any tumor shape and size
- Each needle gain can be independently controlled to optimize heating distribution
- Utilizes SMART™ Adaptive Planning & Control System to dynamically control heating levels
- Suitable for treatment of sites such as sarcoma, vagina, rectum, prostate, breast, head and neck, and lymph nodes

comunicato stampa

DALLA MEDICINA DELLO SPORT ALLA LOTTA CONTRO IL CANCRO

La PAVONI DIFFUSION, società fondata nel 1991 da Pierfrancesco Pavoni, ex sprinter di livello internazionale, attiva nella produzione e la vendita di apparati di ipertermia nel mondo della riabilitazione è lieta di comunicare che dai primi mesi del 1998 il F.C. Internazionale ha acquisito ALBA Hyperthermia System per curare i propri campioni.

ALBA è un apparato di ipertermia a microonde che, raffreddando i tessuti superficiali mediante un sofisticato sistema ad acqua deionizzata, riscalda in profondità a temperature oltre i 40°C i tessuti tendinei e muscolari lesionati. Un riscaldamento così importante stimola una vasodilatazione ed un flusso ematico tali da accelerare notevolmente i tempi di recupero dei traumi muscolo-tendinei sempre più frequenti nei calciatori di alto livello.

Oltre al F.C. Internazionale anche la Juventus F.C. e l'Udinese C. hanno

• Juventus Football Club: our first client 1995-1996

Alessandro Del Piero

The company has used all the financial resources arising from the sales of Alba in sports medicine field to build a new version of Alba dedicated to oncological treatment of superficial and semi deep tumors

degli apparati per la medicina dello sport, per costruire una versione di ALBA ad uso oncologico per la cura dei tumori superficiali e semi profondi.

Nel marzo 1998, dopo oltre 4 anni di ricerca e sviluppo, l'Ospedale Mauriziano, presso l'IRCC di Candiolo, ha acquisito ALBA HYPERTHERMIA SYSTEM ad uso Oncologico, per curare i propri pazienti nel nuovo dipartimento di Radioterapia diretto dal Dott. Pietro Gabriele.

La PAVONI DIFFUSION ringrazia il F.C. Internazionale, la Juventus F.C. e l'Udinese Calcio insieme al mondo della Medicina dello Sport tutto, per aver dato anche attraverso ALBA HYPERTHERMIA SYSTEM il proprio contributo allo sviluppo ed alla realizzazione di strumenti innovativi ed efficaci per la lotta contro il cancro.

Grazie per l'attenzione.

CHANNEL UNIT - FEASIBILITY ANALYSIS -
Rev. 1.0 del 26.10.2007 -

Preface

The present study of feasibility is to consider, as detailed evolution, within an hypothesis to develop a RF equipment for use in the field of clinical hyperthermia, employed in preliminary stage in the reference documentation, suited to generate 12 RF signals at 434.50 MHz, at constant each other, with power levels independent for each signal and ranging from 0W to 200W full scale.

The equipment considered in the preliminary feasibility study above mentioned, connected to a suitable therapeutic applicator, composed by an 12 radiating elements array, realized in ultrasonic technology for 434.50 MHz operating frequency, allows to vary in real time, based on verified behavioural models, width and shape of the globe irradiation lobe of the applicator by controlling the power and the phase for each of the 12 RF signals sent to 12 radiating elements, allowing to concentrate SAR values up to some hundreds of W/kg on masses of target tissue extremely reduced in size and increasing therefore the benefits of the hyperthermia therapy mostly in oncologic applications.

The main block diagram of the equipment, as defined in the preliminary feasibility analysis document (Reference Documentation), is shown in Fig. 1.

..... ma un Ingegnere Medico in
quale campi può essere utile in
ambito sanitario?

Diagnostica

- Ecografia (ultrasuoni)
- Tac (RX)
- Risonanza Magnetica (EMC)
- Mammografia (RX- US-Laser)
- Radiologia (RX)

Terapia

- Chirurgia (meccanica, elettronica)
- Radioterapia (energie ionizzanti elettroni-protoni.....)
- Ipertermia (CEM-US)
- Onde d'urto (CEM-US-EI)

In quale veste?

INDUSTRIALE

- Progettista Sw
- Progettista Hw
- Sistemista
- Qualità
- Assistenza

COMMERCIALE

- Product Specialist
- Sales Development
- Gestionale

SICUREZZA

- Verificatore
- Collaudatore

SICUREZZA

AZIENDE

- Aziende di certificazione:
IMQ- TUV-
CERMET.....
- ASL- Ospedali –
Cliniche

Peculiarità

- Lavoro stabile
- Moderatamente
stimolante
- Attività priva di
creatività

Carattere bioingegnere

- Poca predisposizione
al rischio d'impresa
- Necessità di vita
ordinata e con pochi
spostamenti

Progettista Ingegnere Medico

- diagnostica
- terapia

	Grande impresa	Piccola impresa
PECULIARITÀ	Coinvolgimento in attività specifiche e limitate da svolgersi soprattutto all'estero. Creatività limitata.	Coinvolgimento in tante attività anche non specifiche. Creatività illimitata.
CARATTERE BIOINGEGNERE	Elevate capacità tecniche , predisposizione a lavoro in team.	Elevate capacità tecniche, predisposizione a lavoro solitario, grande capacità di adattamento.

COMMERCIALE

PRODUCT SPECIALIST

AZIENDE	Peculiarità	Carattere bioingegnere
• DIAGNOSTICA Ecografia TAC-RMN • TERAPIA Radioterapia Chirurgia	• Esperto del prodotto che illustra al medico le caratteristiche dello stesso. Formazione. • Lavoro stabile estremamente remunerativo e stimolante • Attività che comporta costante contatto con il pubblico.	• Elevata predisposizione al rischio • Disponibilità a vita disordinata e con molti spostamenti . • Spiccate doti di comunicazione

Il Product Specialist nel mondo elettromedicale

Area medica	Costo medio prodotto	Competenza
Fisioterapia Med. Estetica	5.000-10.000	Non laureato, forse diplomato. Ex tecnico o perito elettronico
Radiologia Eco-rm-ct	40.000-1.000.000	Diplomato specialità tecniche Laureato in medicina o ingegneria. Bio ingegnere
Radioterapia Acceleratori	1.500.000 \ 6.000.000	Laureato in Fisica o ingegneria.

PMI HIGH TECH in Italia ed in USA

High tech impone tempi lunghi di sviluppo e di ttm (time to market)

Aziende ITA

Mercato : MOL
Private Equity: Start up
Fondi Ricerca: Miur...

Comportano attività
collaterali di supporto
all'azienda non sempre
collegate alle proprie
competenze.

Aziende USA

Finanziamento da
OBJ\ Nasdaq
Grandi capitalizzazioni,
costanti durante tutto
il ciclo di sviluppo
Consentono attività di
Ricerca e sviluppo sempre
attinenti alle proprie
competenze.
Brevetti, fda, qualità.

Innovation?

- It is a good Trojan horse to have space both in medical market and in medical companies.

La vera sfida sta
nell'innovazione , nella capacità
di realizzazione, di difesa della
stessa e nel continuo sviluppo,
senza poter contare su alcun
finanziamento che non venga
dal mercato.

Un'invenzione vale se non è
fine a se stessa.

Pensate sempre con il fine di
realizzarla veramente.

Continue a migliorarla.

La vera forza sta nel non
accontentarsi mai....

Non accontentatevi mai...

...ma ogni tanto riposatevi!!!

Thank you for your attention
